Functional programming Riggiest Exam Help

- Church & the lambda calculus wooder
- Scheme
- ML (OCaml)
- Modern times:sftgfipiert Project Texapultelp

https://powcoder.com

OCaml

- Functional language determostratopic worked by analyzing old data and producing new, immutable data
- Simple, typed programming language based on the lambda calculus
- Immutable data is the default; mutable data is possible (imperative, object-oriented)

https://popygodec.hereking

- Every values is may be aniest to every lexpression
- This is a concept that is familiar from Java but it becomes more important when programming in a functional language
- The type of an expression is determined by the type of its subexpression signment Project Exam Help
- We write (e : t) to say that expression e has type t. eg: https://powcoder.com

Add WeChat powcoder

2 : int "hello" : string

2 + 2 : int "I say " ^ "hello" : string

- There are igner to hear that govern type checking
 - programs that do not follow the rules will not type check and OCaml will refuse to compile them for you (the nerve!)
 - at first you may find this to be a pain ...

Assignment Project Exam Help

- But types are a great thing:
 - they help us think about now to construct our programs
 - they help us find stupid economing ecters
 - they help us track down compatibility errors quickly when we edit and maintain our code
 - they allow us to enforce powerful invariants about our data structures

```

Violating the rules:

```
"hello" : string
1 : int
1 + "hello" : ??
(By rule 2)
(By rule 1)
(NO TYPE! Rule 3 does not apply!)
```

• Violating signment Project Exam Help

Add WeChat powcoder

```
# "hello" + 1;;
Error: This expression has type string but an expression weignment Projecty Examt Help
```

https://powcoder.com

- The type error message tells you the type that was expected and the type that it inferred for your subexpression
- By the way, this was one of the nonsensical expressions that did not evaluate to a value
- It is a good thing that this expression does not type check!

"Well typed programs do not go wrong" Robin Milner, 1978

Violatingsignment Project Exam Help

Add WeChat powcoder

```
# "hello" + 1;;
Error: This expression has type string but an expression weignment Projecty Examt Help
```

https://powcoder.com

A possible fix:

Add WeChat powcoder

```
# "hello" ^ (string_of_int 1);;
- : string = "hello1"
```

 One of the keys to becoming a good ML programmer is to understand type error messages.

Example Type thecking Rules

Assignment Project Exam Help

```

???

OCaml says: Add WeChat powcoder

```
Error: This expression has type int but an expression was expected of type string
```

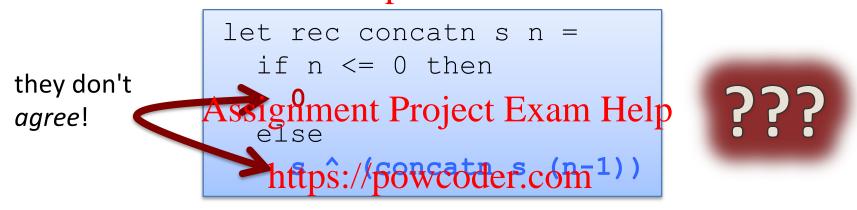

• Type errors to the statements of the statement of the s

OCaml says: Add WeChat powcoder

```
Error: This expression has type int but an expression was expected of type string
```

• Type errors to the state of t

Add WeChat powcoder

The type checker points to the correct branch as the cause of an error because it does not AGREE with the type of an earlier branch.

Really, the error is in the earlier branch.

Moral: Sometimes you need to look in an earlier branch for the error even though the type checker points to a later branch.

The type checker doesn't know what the user wants.

EXCEPTIONS: DO THEY CAUSE PROGRAMS TO "GO WRONG"?

• What about immembresspiect Exam Help

```
Add WeChat powcoder # 3 / 0;;
Exception: Division_by_zero.
```

• Why doesn't the METype the Erector with the favor of telling us the expression will raise an exception?

Add WeChat powcoder

• What ab tigning the Exam Help

```
Add WeChat powcoder # 3 / 0;;
Exception: Division_by_zero.
```

- Why doesn't the Might be the Exercical Taylor of telling us the expression will raise an exception?
 - In general, detecting a divide-by-zero error requires we know that the divisor evaluated to W.e Chat powcoder
 - In general, deciding whether the divisor evaluates to 0 requires solving the halting problem:

```
# 3 / (if turing_machine_halts m then 0 else 1);;
```

 There are type systems that will rule out divide-by-zero errors, but they require programmers to supply proofs to the type checker

https://spovequating?

Assignment Project Fixon Hollo wrong" Add We Chair Milner 1978

(3 / 0) is well typed. Does it "go wrong?" Answer: No. Assignment Project Exam Help

"Go wrong" is a technical term meaning of have no defined semantics." Raising an exception is perfectly well defined semantics, which we ded reachable we can handle in ML with an exception handler.

So, it's not cheating.

https://ppypedsocondness

Assignment draining that you wrong"

SUMMARY

https://powcodec.gom

OCaml is a full through project Framme Halpguage

- Java gets madd work than en by modifying data
- OCaml gets most work done by producing new, immutable data

Assignment Project Exam Help OCaml is a *typed* programming language

- the type of an expression correctly predicts the kind of value the expression will generate when it is executed
- there are systematic rules defining when any expression (or program) type checks
 - these rules actually form a formal logic ... it is not a coincidence that languages like ML are used inside theorem provers
- the type system is sound; the language is safe
